Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant clarified the difference between the prior art used in the rejection versus the pending application. The prior art fills the FIFO pipelines with the full image of the background and discards the unseen portion when displayed on the display whereas the present invention only fills the FIFO pipelines with the portion of the main image intended to be seen. Also, the main idea of the invention is the art of filling the FIFO display pipes rather than displaying the overlay image with respect to the main image. Applicant asked if the response from the examiner will final. Examiner did not confirm this but said a more thorough search will be conducted.
